

European Gamma and  
Ancillary Detectors Network

## **EGAN 2013 Workshop**

Liverpool, June 24-27, 2013

### First Announcement

Dear Colleagues,

We are pleased to announce that the 3<sup>rd</sup> EGAN workshop will take place in Liverpool, UK, on June 24-27, 2013.

After the past successful editions in Padova (2011) and Orsay (2012), which have been dedicated to the status of gamma-spectroscopy research and to aspects related to the use and development of ancillary devices, respectively, this workshop will be more focussed on the collaboration between theoreticians and experimentalists. In particular, we would like to explore different methods and techniques from both the structure and reaction mechanism points of view to plan and design new experiments at the stable and radioactive beam facilities.

The annual open meeting of the AGATA Collaboration Council and the meetings of the EGAN working groups will also be held during the workshop.

Financial support will be available upon request, with special priority to young researchers.

Detailed information about the meeting will soon be available on the workshop website <http://ns.ph.liv.ac.uk/EGAN/>.

Best regards,

The Local Organizing Committee:
